Two fundamental questions in network analysis

Two fundamental questions in network analysis

Is there an effect?

Two fundamental questions in network analysis

Is there an effect?

What is the effect?

Two fundamental questions in network analysis

Is there an effect?

What is the effect?

A network of alcohol disorder symptoms

A network of alcohol disorder symptoms

Why is the edge missing?

A network of alcohol disorder symptoms

Why is the edge missing?

Two possible explanations:

A network of alcohol disorder symptoms

Why is the edge missing?

Two possible explanations:

1. Too little information.

A network of alcohol disorder symptoms

Why is the edge missing?

Two possible explanations:

1. Too little information.
2. True absence.

Two take-home messages

Network estimation is insufficient to determine whether an edge should be included or excluded.

Inclusion tests need to distinguish between **evidence of absence** and **absence of evidence**.

Two take-home messages

Network estimation is insufficient to determine whether an edge should be included or excluded.

Inclusion tests need to distinguish between **evidence of absence** and **absence of evidence**.

The Bayesian analysis of network structures

Evaluate the predictive success of the network structure.

$$P(\text{data} \mid \text{structure})$$

The Bayesian analysis of network structures

Evaluate the predictive success of the network structure.

$$P(\text{data} \mid \text{structure})$$

But which structure?

The Bayesian analysis of network structures

Evaluate the predictive success of the network structure.

$$P(\text{data} \mid \text{structure})$$

But which structure?

The Bayesian analysis of network structures

Evaluate the predictive success of the network structure.

$$P(\text{data} \mid \text{structure } 7)$$

But which structure?

The Bayesian analysis of network structures

Evaluate the predictive success of the network structure.

$$P(\text{data} \mid \text{structure } 3)$$

But which structure?

The Bayesian analysis of network structures

Evaluate the predictive success of the network structure.

$$P(\text{data} \mid \text{structure } s)$$

We assign **prior** weights (probabilities) to the possible structures to reflect our uncertainty about the true structure.

$$P(\text{structure } s)$$

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

$$P(\text{structure 3} \mid \text{data}) = \frac{P(\text{data} \mid \text{structure 3}) P(\text{structure 3})}{P(\text{data})}$$

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

$$P(\text{structure 3} \mid \text{data}) = \frac{P(\text{data} \mid \text{structure 3}) P(\text{structure 3})}{P(\text{data})}$$

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

$$P(\text{structure 3} \mid \text{data}) = \frac{P(\text{data} \mid \text{structure 3}) P(\text{structure 3})}{P(\text{data})}$$

Predictive Updating Factor

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

$$P(\text{structure } 3 \mid \text{data}) = \frac{P(\text{data} \mid \text{structure } 3)P(\text{structure } 3)}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s)P(\text{structure } s)}$$

The Bayesian analysis of network structures

We use data to update our **prior** probabilities to **posterior** probabilities – what we know after having seen the data

$$P(\text{structure } 3 \mid \text{data}) = \frac{P(\text{data} \mid \text{structure } 3) P(\text{structure } 3)}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s) P(\text{structure } s)}$$

The **prior** structure probabilities

$$P(\text{structure } 3 \mid \text{data}) = \frac{P(\text{data} \mid \text{structure } 3) P(\text{structure } 3)}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s) P(\text{structure } s)}$$

The **prior** structure probabilities

$$P(\text{structure 3} \mid \text{data}) = \frac{P(\text{data} \mid \text{structure 3}) \frac{1}{8}}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s) \frac{1}{8}}$$

The **prior** structure probabilities

$$P(\text{structure } 3 \mid \text{data}) = \frac{P(\text{data} \mid \text{structure } 3) \frac{1}{8}}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s) \frac{1}{8}}$$

The **prior** structure probabilities

$$P(\text{structure } 3 \mid \text{data}) = \frac{P(\text{data} \mid \text{structure } 3) P(\text{structure } 3)}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s) P(\text{structure } s)}$$

The marginal likelihood

$$P(\text{data} \mid \text{structure 3}) = \int_{\mathbb{R}} p(\text{data} \mid \sigma_{23}) p(\sigma_{23}) d\sigma_{23}$$

Predictive updating factor

$$P(\text{structure 3} \mid \text{data}) = \frac{P(\text{data} \mid \text{structure 3})^{\frac{1}{8}}}{\sum_{s=1}^8 P(\text{data} \mid \text{structure } s)^{\frac{1}{8}}}$$
